

General Questions

Can Armadillo work with Windows hosting?

The short answer is, technically, yes. However, Armadillo uses certain technology that is designed for Linux and Unix hosting plans.

Therefore, although it is theoretically possible to use Armadillo on a Windows hosting account, we do not recommend doing so, and do not provide support for Armadillo when it is used on Windows hosting.

For a list of hosting companies that provide hosting plans compatible with Armadillo, visit our list of [verified hosting providers](#). This list is being updated on a regular basis, and is not exhaustive, but is a good starting point when looking for web hosting that is compatible with Armadillo.
