How do I add social sharing buttons or links?

As of Armadillo v1.7 you can specify a social sharing code snippet via the Settings panel of the online dashboard.

This social sharing snippet is for use with services like [AddThis](#), [ShareThis](#) and similar services which will create social sharing links or buttons for your website.

Once you have the required code snippet, simply paste it into the "Social Sharing Code" field of the "Social Sharing" section of Armadillo's Settings tab. Then be sure to select the "Show social sharing links" option and save your settings by clicking on the green save button.

When this is complete, Armadillo will automatically add this code snippet to the bottom of every page and post you create in Armadillo.
